Lead Engineer

About Me

Java and Spring Boot developer with 8 years of experience building microservices that perform reliably in real-world production environments. Currently, I'm working on an omnichannel ad tech platform, focusing on event-driven systems, distributed search, and cross-service features. I care deeply about clean architecture and measurable performance, and I'm always looking for ways to grow my skills and stay up to date. I'm also actively exploring AI, with a focus on prompt engineering and prompt management techniques to build more reliable and scalable AI-driven features.

Education

- **Bachelor of Technology in Electronics Engineering** | 2013-2017
Federal Institute of Science and Technology | CGPA 7.2

Work Experience

QBurst, Kochi, India | Lead Engineer | November 2021 - Present

OmniChannel Media Management System | December 2022 – Present

- Designed and delivered an Order workflow microservice integrating MongoDB for persistent storage, FeignClient for synchronous REST-based inter-service calls, and RabbitMQ message queue for event-driven, asynchronous communication across distributed services.
- Built a search microservice on OpenSearch, working closely with query structure and index configurations to improve search performance and scalability.
- Improved performance and concurrency by using ThreadLocal for per-thread caching and CompletableFuture for async, non-blocking processing.
- Actively collaborate with the team through code reviews, design discussions and acting on suggestions to maintain a good code base.
- Integrate JMX monitoring for improved application management.
- Worked with AI agents, implementing skill and prompt management techniques to optimize token usage and improve development efficiency.
- Improved and maintained test coverage across service layers using JUnit and Mockito, enhancing code reliability.
- Worked with cloud platforms to deploy and monitor microservices, relying on cloud-native tools to manage logging and environment consistency.

Integration of Third-Party Trade Processing System | JP Morgan | April 2022 – November 2022

- Project is to integrate a digital platform to process trade finance transaction documents against rule with JPMorgan's legacy Trade Processing System (TPS).
- Worked on the API layer in MuleSoft to facilitate communication between outbound microservices and the Trade Processing System (TPS).
- Training for document examination process in Trade Processing System.
- Developed REST APIs for data transfer between vendor applications and TPS.
- Worked in support tickets for defect handling.

Competence Development Program | December 2022 – March 2022

- Actively participated in client-focused training sessions and built POCs to strengthen understanding of microservice architecture, including inter-service and asynchronous communication.
- Developed and enhanced REST APIs by implementing Swagger for documentation, token-based authentication for security, and pagination and sorting for better data handling.

Infosys, Trivandrum, India | Technology Analyst | April 2018 – November 2021

Order Repository Management System | August 2020 – November 2021

- Collaborated on spring boot microservice which persists order entities created in IBM sterling – an order fulfillment tool.
- Implementing repository layers in service to persist data in MongoDB.
- Implemented AWS SQS and S3 integrations for data archival, and completed AWS Cloud Practitioner certification to deepen cloud knowledge (Expired).

Web Based Sterling Store Customization | January 2019 – July 2020

- Collaborated on customization of the Web-based Sterling Store, part of IBM's Omni-channel Order Management System (OMS).
- Collaborated with Senior Engineers in a professional environment, gaining hands-on experience across the full development lifecycle.
- Focused on UI customization using AngularJS and JavaScript to improve user interface and experience.
- Engaged in backend service configuration and documented OMS pipelines to streamline order management processes.

Technical Skills

Java 8+, Spring Boot microservices, Spring MVC, Spring Data JPA, Spring Security, Java Management Extensions(JMX), SQL, MongoDB, REST API, OpenSearch, OpenFeign, RabbitMQ, Kibana, Maven, Junit, Mockito, Docker, AI tools (claude.md, tasks.md, skills, sub agent)

Achievements

- **Infosys Training** | April 2018- November 2018
High Performer in Infosys Training - scored 85% in initial training at Infosys Global Education Center.
- Client appreciation for successful implementation of enhanced search feature.

Areas of Expertise

Microservices Development, Enterprise Application Development, API Development & Integration, Performance Optimization, Database Management, Agile Methodologies, System Architecture & Design Patterns, Event-driven Architecture, Distributed Systems & Scalability, AI-Assisted Development

Language Proficiency

- **English** | Proficient / Fluent (C2)
- **Malayalam** | Native
